Layor Salami

Legal name: Mubarak Salami

Senior Product Designer, B2B and Platforms

United Kingdom | salamilayor@gmail.com | +44 7881 188551 | layorsalami.com | linkedin.com/in/layor-salami

PROFILE

Senior Product Designer with 9+ years of experience on B2B platforms, internal tools and data-heavy products in healthtech, fintech and logistics. At IndigoEMR, designs the business intelligence suite, self-service report builder, admin back office and Form Builder for a cloud hospital management platform used across 20+ branches. At FirstBank, was sole designer of FirstDirect 2.0, the native corporate banking app for iOS and Android, phone and tablet. Led visual direction on three design systems built from the ground up (IndigoEMR, FirstBank, Sharply), and aligns executives, operations teams and engineering through facilitated workshops. Founded and led Sharply, a B2B logistics marketplace serving 100+ logistics organisations.

SKILLS

Data visualisation and BI: Dashboard design for D3.js implementation, business intelligence for non-technical stakeholders, custom report builders, natural-language report retrieval, chart and data table design, Excel export

Systems and delivery: Design systems, component libraries and tokens, accessibility (WCAG 2.2), design operations, Agile and Scrum, cross-functional collaboration, stakeholder management at scale, design leadership and mentoring

Research and strategy: User research, line-managing researchers, research briefs and questions, ethnographic observation and shadowing, usability testing, A/B testing, journey mapping, information architecture, service design, discovery and co-design workshops, behavioural analytics (PostHog, Hotjar), market sizing, competitive analysis, PRDs and roadmapping

Product design: End-to-end product design, interaction design, UI and visual design, wireframing and prototyping, responsive and native mobile (iOS, Android, React Native), motion and micro-interactions (Lottie), onboarding and conversion, 0-to-1 products

Fintech and compliance: KYC/AML, digital account opening, payments, wallets and FX, card products, banking partnerships, transaction approvals and fraud review, regulatory sign-off

AI: AI product design (guardrails, safe handoffs to people), AI-assisted design and rapid iteration, building products with AI tools (Claude Code, Cursor, v0, Google AI Studio, GitHub Copilot, Figma AI, Figma Make)

Tools: Figma (Variables, Auto Layout, Component Properties), FigJam, Framer, Lottie, Miro, Jira, GitHub, PostHog, Hotjar, Supabase, React Native, HTML and CSS, Microsoft Word, Excel and PowerPoint (expert)

WORK HISTORY

IndigoEMR | Senior Product Designer, Team Lead — April 2022 to present

Cloud hospital management platform: 200,000+ patient records, 300+ healthcare professionals and 20+ branches across multiple markets, with 5M+ appointment visits logged across the platform. Lead and mentor a team of three designers (senior, mid-level, junior) on some products, such as V3, and am the sole designer on others: the patient app, the admin back office and business intelligence. Own the design system.

- Designed a suite of business intelligence dashboards for D3.js implementation (inventory, revenue and cost, patient health, hospital performance, returning-patient and post-surgical tracking), used across all 20+ branches and giving administrators, department heads and CMDs visibility of revenue, medication sales, diagnosis trends, admissions, readmission rate and referral flow. Led the discovery with CMDs, hospital leaders, clients, prospects, surveys and system-usage review, and worked hands-on with the data to map each report to what the database could produce.
- Designed a self-service report builder (sections, filters, date ranges, selectable columns, export) that cut management and board report preparation by 90%; reports generate in 2 to 10 minutes depending on complexity.
- Designed and shipped natural-language report queries in the BI module: users ask for a report in plain language, and when no report matches it asks a follow-up question instead of hitting a dead end.
- Led the admin back office that internal teams use to manage and monitor the EMR service: requirements discovery, metric definition with the CEO and management, information architecture and workflows for client and subscription management, plan configuration, performance and error monitoring, locations, currencies, and market-specific compliance and reporting. Defined the permissions, risks and actions administrators should and should not have in the core EMR.
- Identified that manual form configuration requests were outpacing what the team could support, then proposed and designed a self-service Form Builder end to end: configuration time cut from 1 week to 30 minutes (99%), form-related support tickets near zero, and 250+ custom forms in production (13 per hospital on average) over 2 to 3 years.
- Designed the Partnership feature, live as a pilot with Eye Foundation and The Eye Shop, replacing phone, WhatsApp and paper referrals with permissioned inter-hospital data sharing: role-based access, opt-in by default across four categories (records, inventory, billing, branch mapping) and a read-only-until-migrated rule that keeps the originating hospital's data authoritative.
- Led visual direction for the IndigoEMR design system from the ground up: 150+ components, WCAG 2.2 compliant by default, with token-driven typography, colour and spacing used on every surface, cutting design-to-engineering handoff time by 30%. Introduced UX KPIs that gave leadership visibility of usability and adoption alongside engineering velocity.
- Ran my own research for V3, then commissioned and line-managed two external researchers (one senior) for about three months of on-site fieldwork across hospitals: wrote the brief and research questions, chose the sites and reviewed weekly reports. Withheld the product at first to keep observations unbiased, then checked their findings against my own hypotheses; several held up and shaped V3's architecture and onboarding.

- Market sizing (surveys, questionnaires, desk research) showed fewer than 10% of home-market hospitals run multiple branches; built the case for a sales function aimed at single-branch and partner-network hospitals, and hired and led the first sales hire (interview criteria, KPIs), contributing to a doubling of the hospitals sold to.

FirstBank | Product Consultant, design contract (Senior Product Designer) February 2023 to March 2024

Concurrent with IndigoEMR; reported to the CTO. Digital banking across individual account opening, diaspora banking, account maintenance and corporate banking, working with Sales, KYC, Compliance, Marketing, account officers, corporate banking executives, directors and MDs.

- Sole designer of FirstDirect 2.0, the bank's native corporate banking app for iOS and Android, phone and tablet: modernised a legacy app, brought web-only capabilities into mobile, and redesigned it end to end, from a six-step onboarding reworked from a compliance form into guided setup, to single and bulk payments, beneficiary management, subsidiary switching across 8 organisations, liquidity management, payment insights, invoicing and account sweeping. Designed phone and tablet separately for their contexts; the tablet solution extended the app to more types of users.
- Designed a multi-user transaction approval workflow with batch review; when executives asked for a larger review screen at a demo day, synthesised their feedback into empathy and affinity maps and scoped a dedicated tablet approval experience.
- Led visual direction for a shared design foundation (colour, typography, spacing, components, iconography and a responsive grid from 375px to 1200px) after spotting fragmentation across three vendor-built products; built without a brief, and the other workstreams now run on it.
- Facilitated 10+ workshops for the account opening initiative, some with 300+ attendees, including an 8-lead BRD alignment and a 100+ stakeholder co-design session, and presented the work at a company-wide demo day to directors and MDs.
- Designed the Account Opening SDK for web and mobile: a reusable, checkpoint-based system that lets customers start on one channel (web, mobile, branch) and resume on another without re-entering data, defining which steps were safe to interrupt and what needed re-verification after a gap. Online accounts rose from under 1% to 7% of all account openings by the end of the financial year of launch, with minimal marketing support. Separately, website and web-banking account openings grew from 281 in 2023 to 50,000+ by 2025 (figure from the bank's CTO).

Sharply Africa | Founder and Lead Product Designer February 2021 to 2024

- Founded and led a logistics marketplace as CEO and majority-equity founder with two engineering co-founders, owning product management, research, design, operations, financing and payroll. The platform served 100+ logistics organisations with 1,000+ riders and thousands of orders delivered daily, sustaining a 96% DIFOT rate. On closing in 2024, licensed the product IP to Famasi Africa for their internal logistics while keeping ownership.
- Designed four connected apps end to end (Business Admin, Rider, Partners, Customer), offline-first for local operating conditions, with logistics orchestration that connects businesses without their own fleet to third-party logistics companies and supports businesses running their own.
- Designed a partner bidding portal where third-party logistics companies compete for delivery jobs through a shareable link with no app install, with clear wait-state messaging for variable connectivity.
- Led visual direction for a shared component library built for low-bandwidth use; rebuilt an overbuilt first version around live use cases only, cutting front-end rework by 30%.

Summitech Computing Ltd | UI/UX Designer to Senior Product Designer May 2017 to January 2021

Digital agency. Progressed from UI/UX Designer to Product Designer to Senior Product Designer, with project management duties, across several client projects at once; some owned end to end, others scoped contributions against a project manager's requirements.

- Moniwave (fintech): lead designer and product lead, reporting to the CEO and COO of Summit Group, across multi-currency wallets, FX and P2P exchange, bill payments, virtual and physical cards, KYC gating, transaction approvals, fraud review, sanctions screening and back-office tooling. Designed the product architecture, how KYC interacts with the product and how money moves; led the banking licence process, bank partnerships, the KYC/AML framework and the CBN relationship, managing a team of 5.
- Enaro Energy: led design for a mini-grid provider's customer top-up and usage app and an admin grid-monitoring tool (production, source switching, power loss), mentoring a second designer; the platform is reported to cover over 400,000 households.

OTHER PROJECTS

- Caresify (white-label, delivered through IndigoEMR): designed a shift and care management system for a US and UK home care provider with over 200 carers (client figure): care applications, carer recruitment, shift management, payroll, complaint logging and a carer mobile app with location check-in. Shipped and live.
- Propty (co-founder, in beta): designed the landlord and tenant apps for a property management platform managing 500+ units, improving on-time payment communication from 30% to 58%; wrote the billing requirements, OKRs, PRD and roadmap.
- Story-writing and reading platform (2026, freelance design lead): writer and reader experience, a story-first model of theme-based public collections, an admin rebuilt around one flag-then-resolve moderation loop with role-based admins, and voice dictation for the writing flow.

EDUCATION

MSc User Experience Design, University of Portsmouth, 2025

BSc Finance, University of Lagos, 2021

AML and KYC certification, Coursera, 2020
