Layor Salami

Legal name: Mubarak Salami

Product Designer, Consumer and Native Mobile

United Kingdom | salamilayor@gmail.com | +44 7881 188551 | layorsalami.com | linkedin.com/in/layor-salami

PROFILE

Product Designer with 9+ years of experience designing and shipping consumer and native mobile products for iOS, Android and React Native. At IndigoEMR, designed and shipped the React Native patient app, used by 20,000+ active patients across 200,000+ registered records, and a no-download scan-to-pay portal. Designs and builds independent consumer apps with AI tools: Rabii, a UK coach ticket comparison app on TestFlight, and Mumbuddie, a pregnancy and postpartum companion app in private beta. Earlier work spans an Android-only rider app, banking journeys on phone and tablet, and ecommerce mobile checkout. Grounds mobile decisions in research and behavioural data.

SKILLS

Consumer and mobile: Native mobile design for iOS, Android and React Native, phone and tablet layouts, one-handed and in-motion use, onboarding and conversion, checkout and payments, motion and micro-interactions (Lottie), 0-to-1 products

Research and strategy: User research, line-managing researchers, research briefs and questions, ethnographic observation and shadowing, usability testing, A/B testing, journey mapping, information architecture, service design, discovery and co-design workshops, behavioural analytics (PostHog, Hotjar), market sizing, competitive analysis, PRDs and roadmapping

Systems and delivery: Design systems, component libraries and tokens, accessibility (WCAG 2.2), design operations, Agile and Scrum, cross-functional collaboration, stakeholder management at scale, design leadership and mentoring

AI: AI product design (guardrails, safe handoffs to people), AI-assisted design and rapid iteration, building products with AI tools (Claude Code, Cursor, v0, Google AI Studio, GitHub Copilot, Figma AI, Figma Make)

Tools: Figma (Variables, Auto Layout, Component Properties), FigJam, Framer, Lottie, Miro, Jira, GitHub, PostHog, Hotjar, Supabase, React Native, HTML and CSS, Microsoft Word, Excel and PowerPoint (expert)

WORK HISTORY

IndigoEMR | Senior Product Designer, Team Lead — April 2022 to present

Cloud hospital management platform: 200,000+ patient records, 300+ healthcare professionals and 20+ branches across multiple markets, with 5M+ appointment visits logged across the platform. Lead and mentor a team of three designers (senior, mid-level, junior) on some products, such as V3, and am the sole designer on others: the patient app, the admin back office and business intelligence. Own the design system.

- Identified the unmet need for patient record access and independently designed and shipped a native React Native patient app: results, bill payment, booking and viewing appointments, recent complaints and prescribed medications. Used by 20,000+ active patients across 200,000+ registered records.
- Designed a standalone scan-to-pay portal, with no download needed, so patients settle bills from the waiting room instead of queuing at the cashier; payment queues fell by up to 25% on busy clinic days. Kept accounting intact (pro forma invoices, invoices, QuickBooks and Sage compatibility) and positioned the portal as a low-commitment first touchpoint before the full app.
- Designed and shipped an AI-powered symptom checker in the patient app, built on an existing LLM through its API (prompts, instructions, interface and guardrails; no custom-trained model). Wrote the guardrails myself: it never gives a final diagnosis and always ends by directing the patient to book an appointment with a consultant.
- Research into chronic care showed family caregivers coordinating day-to-day care with no system access; designed a tiered patient-carer access model with secure delegated access to prescriptions and appointments, resulting in fewer missed appointments among carer-linked accounts.
- Tested three prototype iterations (structured list views against appointment cards) to fix how users find historical patient records; reported time to locate records fell by more than 70%, and 90% of users who started using the new view did not return to the old one.
- Led visual direction for the IndigoEMR design system from the ground up: 150+ components, WCAG 2.2 compliant by default, with token-driven typography, colour and spacing used on every surface, cutting design-to-engineering handoff time by 30%. Introduced UX KPIs that gave leadership visibility of usability and adoption alongside engineering velocity.
- Ran my own research for V3, then commissioned and line-managed two external researchers (one senior) for about three months of on-site fieldwork across hospitals: wrote the brief and research questions, chose the sites and reviewed weekly reports. Withheld the product at first to keep observations unbiased, then checked their findings against my own hypotheses; several held up and shaped V3's architecture and onboarding.

FirstBank | Product Consultant, design contract (Senior Product Designer) — February 2023 to March 2024

Concurrent with IndigoEMR; reported to the CTO. Digital banking across individual account opening, diaspora banking, account maintenance and corporate banking, working with Sales, KYC, Compliance, Marketing, account officers, corporate banking executives, directors and MDs.

- Designed the Account Opening SDK for web and mobile: a reusable, checkpoint-based system that lets customers start on one channel (web, mobile, branch) and resume on another without re-entering data, defining which steps were safe to interrupt and what needed re-verification after a gap. Online accounts rose from under 1% to 7% of all account openings by the end of the financial year of launch, with minimal marketing support. Separately, website and web-banking account openings grew from 281 in 2023 to 50,000+ by 2025 (figure from the bank's CTO).

- Sole designer of FirstDirect 2.0, the bank's native corporate banking app for iOS and Android, phone and tablet: modernised a legacy app, brought web-only capabilities into mobile, and redesigned it end to end, from a six-step onboarding reworked from a compliance form into guided setup, to single and bulk payments, beneficiary management, subsidiary switching across 8 organisations, liquidity management, payment insights, invoicing and account sweeping. Designed phone and tablet separately for their contexts; the tablet solution extended the app to more types of users.
- Traced a reported drop-off at identity verification among overseas applicants to a gap between the stated requirement and what shipped (a dead-end button with no location information); redesigned the diaspora journeys for opening and reactivating accounts around a country-specific enrolment centre lookup with addresses and opening hours, save-and-resume, and a guided path for applicants who have the required ID number but do not know it offhand.
- Designed self-service digital account maintenance through the bank's website and digital channels, so customers update supported account details without visiting a branch or queuing; shipped and promoted through banners and marketing.

Sharply Africa | Founder and Lead Product Designer February 2021 to 2024

- Designed the rider app as Android-only after research showed 90% of the rider market used Android; built for one-handed, in-motion use, with colour-coded swipe actions replacing tap-to-confirm for pickup and delivery.
- Used PostHog and Hotjar data to find users dropping off before their first transaction, and rebuilt onboarding around observed behaviour, contributing to a significant rise in repeat usage within the first quarter.
- Founded and led a logistics marketplace as CEO and majority-equity founder with two engineering co-founders, owning product management, research, design, operations, financing and payroll. The platform served 100+ logistics organisations with 1,000+ riders and thousands of orders delivered daily, sustaining a 96% DIFOT rate. On closing in 2024, licensed the product IP to Famasi Africa for their internal logistics while keeping ownership.
- Led visual direction for a shared component library built for low-bandwidth use; rebuilt an overbuilt first version around live use cases only, cutting front-end rework by 30%.

Summitech Computing Ltd | UI/UX Designer to Senior Product Designer May 2017 to January 2021

Digital agency. Progressed from UI/UX Designer to Product Designer to Senior Product Designer, with project management duties, across several client projects at once; some owned end to end, others scoped contributions against a project manager's requirements.

- Nubian Skin: designed the Shopify storefront and mobile checkout with the CEO after Google Analytics showed mobile was the weakest area; improved the mobile storefront, checkout and skin-tone representation around Black Friday, contributing to a 15% uplift in mobile checkouts and roughly doubled sales during a major shopping event.
- Goby Homes (US real estate): sole product designer from V2, owning the redesign end to end (design system, visual identity and logo) and a three-pane architecture that replaced manual listing import with pulled listings; the platform later reached 20,000+ users, per the founder.
- Filmhouse Cinemas and EbonyLife Place: contributed movie discovery, multi-location navigation and food ordering to Filmhouse's online booking rebuild, which led to designing EbonyLife Place's cinema booking and seat selection (with its own design system), hotel and restaurant booking.
- Built interactive prototypes and motion concepts that cut the time between usability testing and launch by 25%, and investor-ready prototypes that helped leadership support new commercial partnerships.

OTHER PROJECTS

- Rabii (2026): designed and built, front end and back end, a UK coach ticket comparison app (FlixBus and National Express) with Claude Code and Cursor. First working build in one sitting; privacy-first (no account, no analytics, on-device search history); moved the backend from a third-party data service to self-hosted fetching after seeing the cost curve; Supabase with a custom back office for routes. MVP on TestFlight.
- Mumbuddie (2026): designed and built, with Claude Code, Cursor, v0 and Google AI Studio, a pregnancy and postpartum companion app for underserved minority communities in the UK and Germany: a native React Native app plus a React web version. Shipped and in private beta.
- FlavorQueste: designed restaurant discovery and booking from search to reservation, for a platform with 500+ restaurants listed and live in Lagos and Abuja.
- Kunda Kids: designed a children's literacy app from research to shipped product within a 22-day contract.
- Caresify (white-label, delivered through IndigoEMR): designed a shift and care management system for a US and UK home care provider with over 200 carers (client figure): care applications, carer recruitment, shift management, payroll, complaint logging and a carer mobile app with location check-in. Shipped and live.
- Story-writing and reading platform (2026, freelance design lead): writer and reader experience, a story-first model of theme-based public collections, an admin rebuilt around one flag-then-resolve moderation loop with role-based admins, and voice dictation for the writing flow.

EDUCATION

MSc User Experience Design, University of Portsmouth, 2025

BSc Finance, University of Lagos, 2021

AML and KYC certification, Coursera, 2020
