MUBARAK SALAMI

Senior Product Designer | B2B SaaS, complex platforms and energy technology

London, UK | salamilayor@gmail.com | +44 7881 188551 | Portfolio | LinkedIn

PROFILE

Senior Product Designer with 9+ years' experience owning end-to-end design across complex B2B SaaS and enterprise products in healthcare, fintech, logistics and energy. Experienced in defining product areas, mapping journeys and workflows, and carrying work from discovery through implementation and iteration with Product, Engineering and business stakeholders. Combines polished UI craft with systems thinking, design system architecture and evidence-based decisions tied to usability, efficiency and business outcomes. Produces high-quality, implementation-ready designs, contributes to existing platform initiatives and new product development, and has built design systems from the ground up while mentoring designers. Uses AI tools to explore scenarios, prototype solutions and accelerate discovery. Energy experience includes a customer app and grid operations platform for a mini-grid provider.

CORE CAPABILITIES

- **End-to-end product ownership:** product area strategy, discovery, journey mapping, information architecture, workflow design, high-quality implementation-ready designs, delivery and iteration across existing products and new product development
- **B2B SaaS and enterprise UX:** complex roles, permissions, operational workflows, data-intensive dashboards, administration and self-service tools
- **Design systems:** component architecture, design tokens, visual foundations, reusable patterns, accessibility and scalable implementation guidance
- **Product outcomes:** success metrics, behavioural analytics, usability testing, measurable efficiency and adoption improvements, evidence-based trade-offs
- **AI-assisted design:** AI-supported concept exploration, scenario modeling, rapid prototyping, workflow experimentation and responsible evaluation of model limitations
- **Leadership and collaboration:** mentoring, design critique, standards, stakeholder communication and partnership with Product, Engineering and Data
- **Tools:** Figma, FigJam, Figma AI, Figma Make, Claude Code, Cursor, v0, Google AI Studio, PostHog, Hotjar, Jira, Miro, React Native, HTML/CSS

EXPERIENCE

IndigoEMR | Senior Product Designer, Team Lead

April 2022 to Present

Lead product design for a cloud hospital management platform used across 20+ branches, supporting 200,000+ patient records and 300+ healthcare professionals. Lead and mentor three designers on selected product areas and independently own business intelligence, the patient app and internal administration platform. Work closely with product, engineering, leadership and users across a regulated, operationally complex environment.

- **Own end-to-end design across multiple product areas**, from problem framing and discovery through information architecture, interaction and UI design, engineering handover, QA and iteration.
- **Designed the business intelligence platform** for hospital leaders, department heads and administrators across 20+ branches. Led discovery with customers and prospects, analysed system use and tested which reports the available data could reliably support. Designed dashboards and a self-service report builder that cut management and board report preparation by 90%; simple reports generate in under two minutes.
- **Connected design to measurable product outcomes.** Introduced UX KPIs across key touchpoints to give leadership visibility into usability and adoption alongside engineering velocity. Used research, PostHog, Hotjar and usability testing to identify friction and assess changes.
- **Evolved a scalable design system** from the ground up, defining typography, colour and spacing and leading a library of 150+ components designed for WCAG 2.2 accessibility. Reduced design-to-engineering handover time by 30% and improved consistency across product surfaces.
- **Designed a self-service Form Builder** after identifying that manual configuration requests were not scaling. Reduced configuration time from one week to 30 minutes and brought related support tickets close to zero; the platform now supports 250+ custom forms.
- **Improved high-frequency workflows:** redesigned historical record finding, reducing reported lookup time by more than 70%; designed a triage queue that reduced accepting and attending the next patient from three or four clicks to one.
- **Applied AI to product design and iteration.** Designed and shipped natural-language report retrieval that asks a clarifying question when a request cannot be matched, plus an LLM-powered symptom checker with explicit guardrails. Facilitated workshops helping product managers use AI to express and test scenarios before roadmap commitment; partnered with engineering on a separate environment for testing concepts with users.
- **Led research that shaped platform strategy.** Conducted initial hospital research and commissioned and line-managed two external researchers for three months of fieldwork. Wrote the brief and research questions, selected sites, reviewed findings and combined observation, interviews and competitor research to inform the next platform architecture and onboarding.
- **Contributed to new product development.** Made the case for a ground-up redesign of the platform when its architecture constrained onboarding and scalability; now leading the system architecture and design system for V3, currently in design.
- Designed and shipped a React Native patient app used by 20,000+ active patients and a scan-to-pay portal that reduced payment queues by up to 25% on busy clinic days.

- Mentor a team of three designers through design critique, delivery guidance and quality oversight; share patterns and standards across product teams.

FirstBank | Product Consultant, Product Design (contract)

February 2023 to March 2024 | concurrent contract

Design consultant reporting to the CTO, partnering with Product, Engineering, Compliance, Sales and senior banking stakeholders across account opening, customer self-service and corporate banking.

- **Sole designer for FirstDirect2.0**, a corporate banking app across iOS and Android. Owned the end-to-end experience across onboarding, single and bulk payments, approvals, beneficiary management, subsidiary switching, liquidity, invoicing and account sweeping, with separate phone and tablet designs.
- Designed a reusable web and mobile account-opening SDK that let customers start on one channel and resume on another without repeating completed steps. Online accounts rose from under 1% to 7% of all account openings in its launch financial year.
- Facilitated 10+ workshops, including an eight-lead requirements alignment and a 100+ stakeholder co-design session; presented design decisions to directors and managing directors.
- Led visual direction for a shared design foundation across independently built products, aligning components, tokens, typography, colour, spacing and responsive behaviour. Partnered with Engineering and Compliance through QA and regulatory sign-off.
- Investigated a 70% identity-verification drop-off among overseas applicants, identified the experience gap and redesigned the journey around enrolment-centre information, save-and-resume and a guided route for retrieving an ID number.

Sharply Africa | Founder and Lead Product Designer

February 2021 to 2024

Founded and led a B2B logistics marketplace serving 100+ logistics organisations and fleets with 1,000+ riders. Owned product strategy, research, design and delivery across four connected products: Business Admin, Rider, Partners and Customer.

- Owned end-to-end design across a multi-sided platform, including operational dashboards, an offline-first rider app and a no-install partner bidding portal.
- Used PostHog and Hotjar to identify onboarding drop-off before first transaction; redesigned the journey around observed user behaviour, contributing to increased repeat usage in the first quarter.
- Built and refined a shared component library across separately developed products; refocusing it on live use cases reduced front-end rework by 30%.
- Built and managed a multidisciplinary team of 7+ designers and developers, setting delivery expectations and supporting product quality.

Summitech Computing Ltd | Product Designer / Senior Product Designer

May 2017 to January 2021

Designed products across fintech, energy, property, entertainment and ecommerce in a digital agency, with ownership from end-to-end engagements to defined project work.

- **Enaro Energy:** led design for a customer energy app for credit top-up and usage tracking, plus an operations platform for monitoring grid production, source switching and power loss across a mini-grid network serving 400,000+ households.
- **Moniwave:** led product design and direction for a fintech product spanning wallets, FX, payments, cards, KYC, transaction approvals, fraud review and back-office tools; managed a five-person team.
- **MultiChoice (DStv):** researched a nationwide manual field-service process and designed a technician app and tiered management platform for real-time installation tracking.
- **Goby Homes:** owned the redesign of a US property platform, including its design system, information architecture and buyer-to-agent workflows.

SELECTED INDEPENDENT PRODUCTS

- **Rabii (2026):** designed and built a UK coach-ticket comparison app, including a self-hosted data backend and custom route-management back office, using Claude Code and Cursor. MVP on TestFlight.
- **Mumbuddie (2026):** designed and built a pregnancy and postpartum companion for underserved minority communities in the UK and Germany using React Native and AI-assisted tools. Shipped in private beta.

EDUCATION

- **MSc User Experience Design**, University of Portsmouth, 2025
- **BSc Finance**, University of Lagos, 2021
- **AML and KYC Certification**, Coursera, 2020
