MUBARAK SALAMI

Senior Product Designer | AI-native product design, research and front-end delivery

London, UK | salamilayor@gmail.com | +44 7881 188551

Portfolio | LinkedIn

PROFILE

Senior Product Designer with 9+ years' experience taking complex digital products from discovery to launch across B2B SaaS, healthcare, fintech and marketplaces. Combines strong visual and interaction design with field research, clear product writing and practical systems thinking. Has built design systems from the ground up, designed and shipped AI-enabled features with explicit guardrails, and uses Claude Code, Cursor, Figma Make, v0 and other AI tools to build working products and test ideas quickly. At IndigoEMR, leads design for a healthcare platform used across 20+ hospital branches; independently designed and shipped products including a patient app, analytics suite and internal tools. Motivated by products that make important services easier to access and use.

CORE STRENGTHS

- **End-to-end product design:** problem framing, discovery, sketches, flows, prototypes, visual design, implementation partnership and iteration
- **Research and validation:** field observation, interviews, usability testing, research briefs, surveys, workflow analysis and behavioural analytics
- **AI-assisted design and building:** Claude Code, Cursor, Figma Make, v0, Figma AI and Google AI Studio; rapid prototyping, front-end implementation and critical review of AI output
- **AI-ready product delivery:** provide coding tools with product context, component patterns and constraints; use AI review skills to inspect generated code and improve the quality of subsequent iterations
- **Design systems:** visual foundations, reusable components, design tokens, accessibility and consistent patterns across product surfaces
- **Research and product analytics:** user interviews, in-context observation, prototype testing, PostHog session recordings and workflow analysis
- **Complex SaaS and content-heavy workflows:** clinical operations, reporting and analytics, financial workflows, self-service configuration, role-based tools and educational content
- **Collaboration and communication:** close work with product, engineering, content, compliance and leadership; workshops, critiques, mentoring and clear interface copy
- **Tools:** Figma, FigJam, PostHog, Hotjar, Miro, Jira, React Native, HTML/CSS, GitHub

EXPERIENCE

IndigoEMR | Senior Product Designer, Team Lead

April 2022 to Present

Lead product design for a cloud hospital management platform used across 20+ branches, supporting 200,000+ patient records and 300+ healthcare professionals. Lead and mentor three designers on selected products and work as the sole designer on areas including the patient app, business intelligence and internal administration.

- **Own design from discovery through delivery** across clinical, administrative, analytics and patient-facing products, working with product and engineering to turn operational problems into shipped workflows.
- **Work in Shape Up six-week cycles** with product and engineering partners, shaping pitches around a clear user problem, appetite, risks and a deliverable outcome.
- **Research real users in context.** Conducted hospital research and commissioned and line-managed two external researchers through three months of fieldwork. Wrote the brief and research questions, selected sites, reviewed weekly findings and combined observation, interviews, competitor research and PostHog session recordings to shape the V3 architecture and onboarding.
- **Designed and shipped an analytics suite** for hospital administrators and leaders across 20+ branches. Paired stakeholder interviews, observation, surveys and usage analysis with hands-on checks of what system data could support. The dashboards and self-service report builder cut management and board report preparation by 90%; simple reports generate in under two minutes.
- **Made dense information usable.** Designed reporting across revenue, inventory, patient health and hospital performance, plus custom report building with filters, date ranges, selectable columns and Excel export. Added natural-language report requests with a clarifying follow-up when a match is not found.
- **Built and maintained the product design system** from the ground up, setting typography, colour and spacing and creating 150+ components designed for WCAG 2.2 accessibility. The system reduced design-to-engineering handoff time by 30%.
- **Designed a self-service Form Builder** after identifying that manual configuration requests could not scale. Reduced configuration time from one week to 30 minutes, brought related support tickets close to zero and now supports 250+ custom forms.
- **Improved high-frequency staff workflows.** Designed a dedicated triage queue that reduced accepting and attending the next patient from three or four clicks to one. Redesigned historical record finding after research showed users struggled, reducing reported lookup time by more than 70%.
- **Designed and shipped an AI symptom checker** using an existing LLM API, defining the interface, instructions and guardrails. It does not diagnose and directs patients to book an appointment with a consultant.
- **Introduced AI-assisted concept testing** across the product organisation. Ran workshops for product managers, built working prototypes ahead of formal design handoff, and partnered with engineering to establish a separate environment where concepts could be tested with users before the team committed to production work. Provided AI coding tools with product context, component guidance and implementation constraints; reviewed generated code with AI review skills and shared practices that improved the team's outputs.
- **Designed and shipped a React Native patient app** for results, bills, appointments, complaints and prescribed medication, now used by 20,000+ active patients. Also designed a scan-to-pay portal that requires no app download and reduced payment queues by up to 25% on busy clinic days.
- Write and refine product flows and interface content with cross-functional partners; present design rationale and research findings to leadership and delivery teams.

- Shape pitches with product managers and engineers for betting-table decisions, and create product materials that help sales and customer-success teams explain value to customers.

FirstBank | Product Consultant, Product Design (contract)

February 2023 to March 2024 | concurrent contract

Partnered with product, engineering, compliance, sales and senior stakeholders on digital account opening, customer self-service and corporate banking.

- Designed a reusable account-opening SDK for web and mobile, allowing customers to start on one channel and resume on another. Online accounts rose from under 1% to 7% of all account openings in its launch financial year, with minimal marketing support.
- Facilitated 10+ workshops, including an eight-lead requirements alignment and a 100+ stakeholder co-design session; presented the work to directors and managing directors.
- Investigated a 70% identity-verification drop-off among overseas applicants and redesigned the journey around country-specific enrolment-centre information, save-and-resume and a guided route for customers retrieving their ID number.
- Sole designer for FirstDirect2.0, a corporate banking app across iOS and Android, including distinct phone and tablet experiences. Reworked onboarding and designed payments, approvals, beneficiary management, subsidiary switching, liquidity and invoicing; partnered with engineering and compliance through QA and regulatory sign-off.
- Created a shared design foundation across independently built products, aligning colour, typography, spacing, components and responsive behaviour.

Sharply Africa | Founder and Lead Product Designer

February 2021 to 2024

Founded and led a logistics marketplace, owning product strategy and design across business, rider, delivery-partner and customer products. The platform served 100+ logistics organisations and fleets with 1,000+ riders.

- Took four connected products from operational needs through research, design and delivery, including an offline-first rider app and a no-install partner bidding portal.
- Used PostHog and Hotjar to identify onboarding drop-off before first transaction and redesigned the flow around observed behaviour.
- Reworked the shared component library around live product use cases, reducing front-end rework by 30%; built and managed a multidisciplinary team of 7+ designers and developers.
- Partnered with sales and customer-success colleagues on product materials and explanations that helped customers understand the marketplace and its delivery workflows.

Summitech Computing Ltd | Product Designer / Senior Product Designer

May 2017 to January 2021

Designed products across fintech, energy, property, entertainment and ecommerce in a digital agency setting, with ownership varying by engagement.

- **Moniwave:** worked with the CEO and COO on product direction and delivery across wallets, FX, cards, payments, KYC and back-office workflows; managed a five-person team.
- **MultiChoice (DStv):** researched a manual nationwide field-service process and designed a technician app and management system for tracking installation work.
- **Enaro Energy:** led design for a customer energy app and an operations tool for monitoring grid production, source switching and power loss.
- **Kunda Kids:** designed a content-rich children's literacy application from research through production in a 22-day engagement. Observed teachers teaching and students learning with the product, then worked with teachers, writers and illustrators to shape the educational content and interactions for how children learn.

SELECTED PRODUCTS BUILT WITH AI TOOLS

- **Rabii (2026):** designed and built a UK coach-ticket comparison app, including front end, backend and custom route-management back office, using Claude Code and Cursor. MVP on TestFlight.
- **Mumbuddie (2026):** designed and built a pregnancy and postpartum companion for underserved minority communities in the UK and Germany using React Native, Claude Code, Cursor, v0 and Google AI Studio. Shipped in private beta and gathering user feedback.

EDUCATION

- **MSc User Experience Design**, University of Portsmouth, 2025
- **BSc Finance**, University of Lagos, 2021
- **AML and KYC Certification**, Coursera, 2020
